Connecting to the WSUV WiFi network on iOS devices

**Supported Versions:** The connection system supports iOS versions 2.0 and later.

**Connection steps:**

1) Connect to the WSUV WiFi Guest network. It should appear in your list of available networks in Settings > Wi-Fi. You are connected when a checkmark appears next to the network name.

2) Go to [http://vancouver.wsu.edu/wifi](http://vancouver.wsu.edu/wifi) in a Web browser

3) Tap the “Connect to WSUV WiFi” button
4) Tap the “Students/Faculty/Staff” button (unless you do not have a network ID and want to use and access code. For that option, tap the “One-time Access Code” button.)

5) Enter your Network ID and password, then tap “Continue”.

6) Review the Terms & Conditions, then tap “Start”.
7) On the Install Profile screen, tap the “Install” button.

8) If you have a passcode set on your device, enter it now.

9) Tap “Install”
10) Tap “Done”

11) Return to your Settings > Wi-Fi screen and choose WSUV WiFi from the list of available networks. You are connected when a checkbox appears next to the name of the network. Your iOS device should now auto-connect to the WSUV WiFi network when it is in range.
